Kit contains fittings to tie into both 2" and 1-1/2" fill lines.

Step by Step Instructions

1. Assemble the fill kit strainer assembly as shown, referencing page 2 as necessary.
2. Bolt the rear bracket 2628Y1 to the 6" tube on the Crustbuster wing. The vertical support will rest on the main drill frame.

3. Attach the Manifold x Pipe Thread adapter fitting into the bottom of the 400 gallon tank and assemble tank fill valve assembly as shown (Reference Page 2)
4. Use 1-1/2" hose to connect the fill kit to the tank fill valve, routing it along the frame toward the tank. Use vinyl band clamps to secure hose to the bolts holding down the hydraulic lines.

5. If using SurePoint Tower system, fittings will be assembled as shown below left, and threaded into the smaller 3/4" bung under the tank. Route 3/4" hose from the tank to the Tower.

7. If using the PumpRight, assemble the fittings as shown bottom right, using the correct size hose barbs to splice into the fill line. (Multiple size hose barbs are provided)
8. Plug 3/4" bung under the tank that is not being used.
9. Splice into the fill line where it will be convenient to close the valve during filling and route hose to the inlet of the pump.
