

SERIAL NUMBER DASH EXCEPTION

When serial number types are set up at https://support.surepointag.com/serial_number_and_label_types/new/, a prefix is entered as well as a number of additional digits. The example below is configured with 11 total alphanumeric characters (5 in Prefix field plus 6 in Number of Digits field).

Company:*	SurePoint Ag
Layout type:*	Serial Number
Part number:	607-10-42MK26 Arsenal Spray Trailer, 42' (No Tires or Axles)
Name:*	Arsenal Spray Trailer, 42' (No Tires or Axles)
Prefix:	ARS02
Num of digit:	6
Current value:	

Serial Numbers are then generated at https://support.surepointag.com/serial_numbers/new/ (example below from the same 11 alphanumeric character configuration). A dash is automatically inserted to separate the prefix from the rest of the digits.

ARS02-000035

This should remain as-is for all alphanumeric character totals other than seventeen. When the total alphanumeric characters is seventeen, do not add the dash separator.
